

## **ProNutiva® Proves its Value across Crops in Brazil**

### SOYBEANS

- “With the use Arysta’s program, I obtained a very satisfactory increase in yield, reaching an average of 6 more bags per hectare. I am very satisfied. I use and recommend.” Sérgio Pasini, RS - Brazil
- “I have used Arysta's program in my Soybeans fields for 3 years, always showing good results in yield increase.” Elton Froelich, RS – Brazil

### WHEAT

- “I used the Arysta’s products in seed treatment and foliar application in wheat. I have verified more roots and better stand, development and plant structure. I had an increase of 3.7 bags / ha in the treated area.” Luiz Antonio Marioto – PR/Brazil

### SUGARCANE

- “On Ratoon cane provides greater rooting, increase in the number of tillers and, consequently, increase of yield and longevity of the cane field.” – Paulo Roberto Artioli – Tecnocana – SP/Brazil
- “We observed that in 100% of the treated areas there were gains in the initial stage, and a higher percentage of tillering. These benefits are clearly contributing to a better formation of our cane fields.” – Cicero Garbelini -- Vale do Verdão Sugar Mill – GO/Brazil

### CORN

- “The products are good, I have already verified the results in wheat, soybean and corn, with less incidence of phytotoxicity and stress in days of high temperature” – Cristiano Fellipin, RS/Brazil

### RICE

- “In pursuit of quality and high yield, I have used Arysta’s program and I am having great results in my field” – Flávio Bottega, RS

### BANANA

- “... treated area with Arysta’s products has been standing out over other area of the farm using other foliar ...” – José Luiz Correa, Brazil
- "... greater yield and fruit growth is evident ..." Oscar França, Brazil
- "... even with the bunch there is advance of the seedlings, despite the weather problems in the region of production, there was a gain of 2 tons ..." Oscar França, Brazil

### CABBAGE

- “It had more uniformity, an advance, where Raizal + K-tionic and Ranman (CYAZOFAMID) were sprayed. The area that had the focus of Hernia, obtained a better use, that is, helped disease control and was very positive Arysta’s program.” – Celso Miyayaciki, Brazil

### LETTUCE

- "I got a very interesting result in my production. There was a lot of losses implicating low yield. After the trials, I had more lettuce per plot, precocity and quality in my product." – Natalino Araki – Brazil
- "The result was clear in the harvest. We had a standardization and uniformity in the harvest, making it possible to harvest more in the plots, with quality and greater size and firmness. " – Isami Tomita – Brazil
- "After Arysta's trials on my property, I started to use the products and had greater utilization of plants per mt<sup>2</sup>, and today I recommend the Arysta program." – Andre Luiz Ramiro – SP/ Brazil

### CHARD

- "As soon as the treatment was started the result was very expressive. It had a very quick start up and a good uniformity. The chard was larger and heavier." – SP/Osmar Ticeu

### CAULIFLOWER

- "With Arysta's programs trials that was done on my property, I noticed a greater number of viable plants, higher plant standardization and better shelf life, and plants with lower bacterial counts compared to my standard." – José Gilson de Oliveira – Brazil

### ARUGULA

- "After I started using Arysta's program, I had an increase in yield, to fill a package I needed 6 to 7 plants, now I use 4 plants, so I increased my production by 40%." – Vania Hopper - Brazil
